

Pavel Pokrovskii

HEAD OF ENGINEERING

Profile

With over 15 years of experience as a technical manager, I specialize in building and leading cross-functional teams to successfully deliver end-to-end innovative solutions. My strengths lie in defining clear roadmaps, managing both products and people, and driving projects to completion with a focus on efficiency and collaboration.

Employment History

AVP of Platform Engineering, Network International, Dubai

DECEMBER 2017 – PRESENT

Squad Lead – Leading the Development of Issuing Products and Solutions for Card Issuers

Managed multiple distributed Scrum Teams (30+ people) to deliver Issuing Products and solutions for Card Issuers, including:

- Corporate Portal – Enabled commercial clients to manage account and card hierarchies, balances, limits, money transfers, and transaction reporting in a user-friendly digital portal.
- Onboarding Portal – Simplified the onboarding process for Card Issuing Banks, enhancing operational efficiency.
- Cardholders' Portal – Developed a platform for end users to easily manage their cards and finances.
- Agents' Portal – Built a portal for card distribution agencies to streamline card sales for banks.

Acquiring Projects:

- POS Device Integration – Integrated POS devices into two existing eCommerce platforms, leading both Android app development and backend integration.

Key Responsibilities:

- Developed Web Portals and APIs – Led the development and launch of Web Portals and APIs to enhance client experience and improve operational workflows.
- Integrated AI and Automation – Introduced AI and GenAI tools to improve automation and efficiency across several products.
- Built and Led Scrum Teams – Assembled and managed distributed, cross-functional Scrum teams. Set vision, roadmaps, and customer-focused goals, providing feedback during demos and planning sessions.
- Fostered a Culture of Learning and Innovation – Established a learning culture, hiring and mentoring teams.
- Implemented Modern SDLC Practices – Integrated code reviews, static analysis, automated and acceptance testing, ensuring high product quality.
- Authored Technical Documentation – Created technical documentation and architectural diagrams, ensuring alignment with business needs while keeping them practical.
- Monitored and Reported Team Progress – Tracked team progress and communicated updates to stakeholders.
- Managed Budgets and Resources – Tracked budget, resource allocation, and infrastructure costs to ensure project success.

- Resolved Impediments and Managed Stakeholders – Actively removed blockers and worked closely with teams in infrastructure, information security, sales, and change management.
- Prepared Presentations for Stakeholders – Delivered presentations to top management and external stakeholders for budget requests, information security, and change control board approvals.
- Passed PCI DSS Compliance Audit – Led the team through a successful PCI DSS compliance audit.

Technical Product Owner – Database Performance Optimizations Team

Led a team focused on meeting SLAs for client reports by enhancing the performance and efficiency of database operations:

- Optimized ETL and SQL Performance – Improved the performance of complex SQL queries and the ETL process for reports generated from the Way4 Cards and Way4 Datamart systems (Card Management System by Openway).
- Refined ETL Process – Refactored the ETL process to streamline data flow and boost overall efficiency.
- Oracle Migrations – Implemented zero-downtime Oracle database migrations to ensure continuous availability.

Key Responsibilities:

- Defined KPIs – Established KPIs to ensure alignment with both team objectives and broader business goals.
- Led Agile Transformation – Spearheaded the transition from waterfall to agile methodologies, leading to improved project delivery, flexibility, and innovation.
- ETL Framework Migration – Managed the migration to in-house ETL frameworks using Python, significantly enhancing data processing and enabling AI-driven insights.
- Performance Monitoring – Implemented performance monitoring for reports using SQL, Python, InfluxDB, and Grafana, ensuring system reliability and transparency.
- Scrum Facilitation – Facilitated Scrum processes, including sprint planning, daily standups, and retrospectives, driving team efficiency and cohesion.
- Results Reporting – Demonstrated and communicated project results to stakeholders, ensuring transparency and continuous alignment with business objectives.

Scrum Master – Card Management Solution Core Product Team

Led the development of a corporate product in partnership with Mastercard on the Way4 Cards platform (Card Management System). Key achievements include:

- API Development – Built a robust set of APIs to enhance product usability, integrating Way4 Transaction Switch and TIBCO for seamless transactions.
- Data Handling Optimization – Developed batch interfaces and file extracts to improve data handling efficiency and streamline operations.
- Bank Migration – Successfully led the migration of several banks from Vision+ to Way4, ensuring minimal disruption and smooth transitions.

Key Responsibilities:

- KPI Definition – Established KPIs to align team performance with strategic business goals and deliver measurable outcomes.
- Scrum Facilitation – Guided the team through the full Scrum process, including sprint planning, daily standups, and retrospectives, maintaining high performance and agility.
- Stakeholder Communication – Delivered regular project updates and reports to stakeholders, ensuring alignment and transparency throughout development.

- Budget and Resource Management – Monitored and controlled budget and resource allocation to ensure projects were delivered on time and within scope.

Scrum Master – DevOps Team

Managed over 100 testing environments and drove automation of CI/CD processes across multiple systems to enhance operational efficiency. Key achievements include:

- CI/CD Automation – Streamlined CI/CD pipelines for Way4, Talend, and Control-M, significantly improving deployment speed and reducing manual effort.
- Configuration Management Database (CMDB) – Implemented a CMDB to manage environment configurations, enabling secure access to configuration data and credentials for users.
- API Performance Testing – Automated API performance testing to ensure system reliability, scalability, and efficiency.

Key Responsibilities:

- Scrum Facilitation – Led the Scrum process, ensuring smooth sprint planning, daily standups, and retrospectives to keep the team focused and productive.
- Regression Testing Automation – Automated regression testing execution and reporting using Bamboo, Jira APIs, SQL, Python, and Confluence, boosting testing efficiency.
- Development Progress Automation – Automated development progress reporting with Jira APIs, SQL, Python, HTML, JavaScript, and Bootstrap, improving project visibility.
- Stakeholder Reporting – Presented project results and progress updates to stakeholders, ensuring transparency and alignment with goals.

Scrum Master – Test Automation Team

Led the automation of regression testing for Card Management Products on the Way4 platform (Card Management System) using proprietary test automation tools (Product Inspector).

Key Responsibilities:

- Scrum Facilitation – Guided the team through the Scrum process, overseeing sprint planning, daily standups, and retrospectives to ensure continuous progress and alignment.
- Stakeholder Reporting – Regularly demonstrated and communicated test automation results and progress to stakeholders, ensuring clarity and transparency.

Project Manager, Luxoft, Moscow

MARCH 2010 – DECEMBER 2017

Managed a development team of up to 7 members, serving as Scrum Master, System Analyst, and Project Manager in the creation of a Foreign Exchange (FX) operations management system for a top 3 Russian bank. Coordinated multiple distributed teams across different Moscow offices.

Key Responsibilities:

- End-to-End Project Management – Led sub-projects from initial analysis to final UAT, go-live, and ongoing maintenance, ensuring timely and successful delivery.
- Roadmap and Backlog Management – Maintained the product roadmap, facilitated task breakdown, wrote user stories and use cases, and conducted task estimation sessions to streamline delivery.
- Acceptance Criteria Definition – Established and validated acceptance criteria to ensure the product met business requirements.

- Conflict Resolution – Actively resolved team and project conflicts to maintain productivity and team cohesion.
- User Engagement – Facilitated meetings with end-users, conducted final product demonstrations, and gathered feedback to guide further improvements.
- SL3 User Support – Provided SL3 user support to address escalated issues efficiently.
- UX/UI Collaboration – Led UX/UI design sessions in partnership with UI designers, aligning the design with user needs and business goals.
- JIRA Workflow Optimization – Fine-tuned JIRA workflows to meet the specific needs of the client, enhancing project tracking and reporting.
- Agile Adoption – Successfully implemented both Kanban and Scrum methodologies across three different sub-teams, tailoring the approach to fit the team's workflow.
- QA Team Mentorship – Mentored a team of three QA engineers on a parallel project, driving quality improvements and knowledge sharing.
- Configuration and Environment Management – Managed system configurations and environments to support development and deployment activities.
- Hands-On QA and Automation – Conducted managerial and hands-on QA work, including developing test automation scripts in C# to improve testing efficiency.

QA Engineer, CSoft, Moscow

APRIL 2008 – MARCH 2010

Conducted User Acceptance Testing (UAT) for Computer-Aided Design (CAD) Applications, playing a pivotal role in determining product readiness for go-live.

Key Responsibilities:

- Go-Live Decision Making – Defined quality criteria and made go-live decisions based on whether the product met these standards.
- Test Planning and Execution – Created comprehensive test plans and test cases to ensure thorough product testing and coverage.
- Test Reporting – Compiled and reported testing results to stakeholders, providing clear insights into product quality and readiness.
- End-User Support – Provided support to end-users, addressing issues and feedback to enhance user experience.

Education

Master, Moscow State University of Railway Engineering, Moscow

SEPTEMBER 2005 – JUNE 2010

Master Engineer-Programmer

Software and automated systems

Courses

Certified Scrum Master (CSM), Scrum Alliance

Certified Product Owner (CSP), Scrum Alliance
